TECHNOLOGIES

LANGUAGES

Spanish	Native
English	<u>C2 (Proficient)</u>
German	Basic

I am a dreamer, dedicated and proactive person. Working doing what I like is my greatest fortune. Entrepreneurship and UX have always been present in my life, therefore, carrying out projects and creating new things working as a team is what I enjoy the most.

PROJECTS

COUNTRIES APP / ENE 2022 [ACADÉMICO]

Development of a SPA (Single Page Application) with ReactJs, Redux and CSS for the front-end and the use of NodeJs in conjunction with Sequelize and Express for the back-end. I worked with PostgreSQL to create the database and an external API called RestCountries to make all the requests to obtain the necessary information. On the app you can see many different countries with information about them, two types of filters, search methods and the possibility of creating your own Activity.

ECOMMERCE / FEB 2022 [ACADÉMICO]

Buyme App is a final project developed by a group of 8 people to graduate from Henry's Bootcamp. It consists of a client-server application to manage an ecommerce. It consists of two parts, the client (buyer) and the administrative part (administrator). Among its functionalities is to log in, manage sales, view product and sales information, receive payments, etc. It uses Mercado Pago as a payment platform.

React - Redux - Javascript - Node - PostgreSQL - Nodemailer - Mercado Pago API - Express - Sequelize - CSS - HTML.
